KX-T206

The Small System with Big Ideas

KX-T206

The Small System with Big Ideas

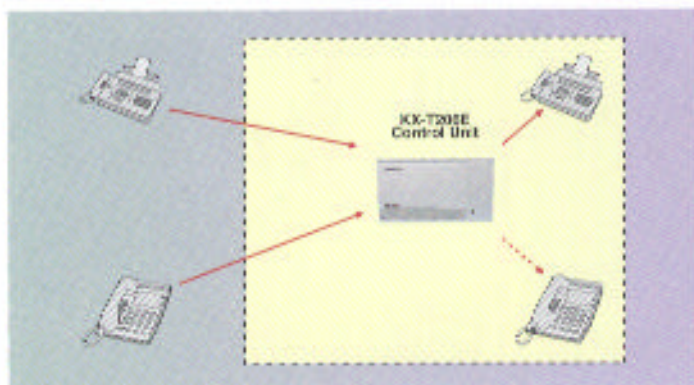

Whether it be a small office or home office environment the telephone is your main source of communication - your link to business partners, customers, family and friends. You may require the use of more than one telephone line, perhaps for another family member or colleague. The KX-T206 provides not only the capacity to have a second line in your home or office, but will allow you to use an existing line to access features which appeal to the most sophisticated but cost conscious users.

Flexible Hybrid Working

The system will accommodate single line devices such as a multi functional Panasonic telephone, answering machine, fax, PC, modem etc. as well as proprietary key telephones which are already widely sold with our 7000 Series range of telephone systems.

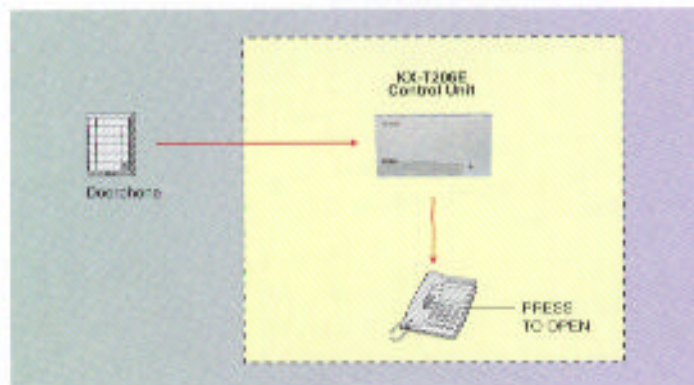

Individual Extension Capability

The system allows up to 6 telephones or devices to work independently of each other, in that they have their own extension number and ability to make or receive calls on either one or two lines. This means that you might have a telephone in the kitchen and a fax in the study, which can be operated completely separately, although still controlled by the system's Central Control Unit.

Automatic Fax Transfer

The system makes efficient use of one or two outside lines particularly if you have a fax machine. It is able to automatically answer incoming calls and distinguish between fax and voice calls, transferring the call accordingly. Therefore, day or night, fax calls can be handed without disturbing you, and you don't have to dedicate an outside line for exclusive fax use.

Built-in Doorphone/Door Opener Interface

The system allows you to monitor the arrival of visitors before you need to open the door. With the optional doorphone intercom unit, this facility permits visitors to announce themselves to you and be automatically allowed to enter, if you so wish. (An electronic locking device would be required).

System Speed Dialing

Up to 40 frequently used telephone numbers can be stored in the system memory and be accessed from any telephone that is connected to the system.

Call Barring

If you wish, you can prohibit individuals from accessing specific telephone area codes, by programming any one of up to 4 classes of restriction. This feature can prevent long-distance dialling for example, and calls overseas from unauthorised users.

Paging

This enables extensions to contact each other via an 'intercom' facility via the speakers of proprietary telephones.

Do Not Disturb

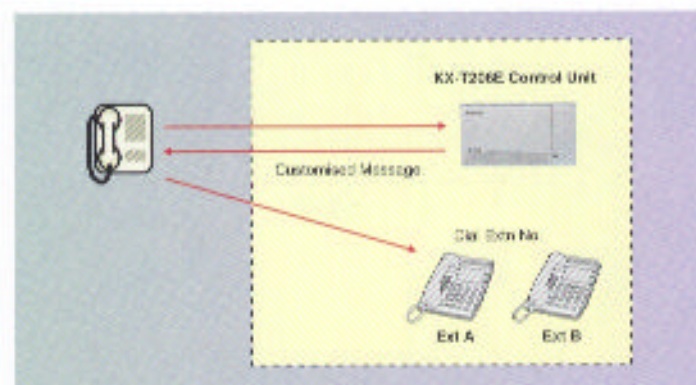

If you are busy or do not want to be disturbed then you can switch your telephone off.

Distinctive Ringing

This feature allows you to determine the difference between outside, internal and doorphone calls.

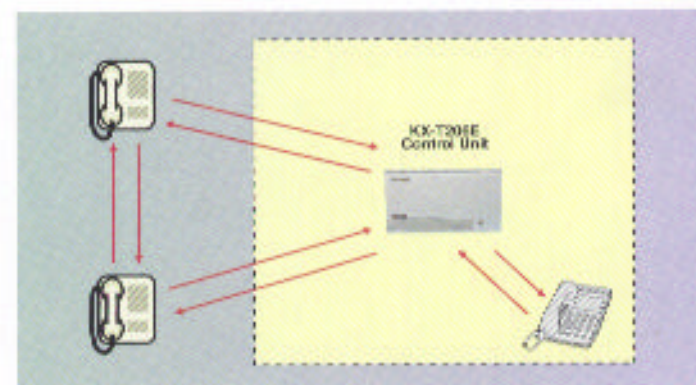

Least Cost Call Routing

The system can be programmed to take advantage of up to 5 of the most cost effective network carriers, to help you minimise the cost of outgoing calls.

Direct Inward Station Access (DISA)

This facility enables you to record a personalised message to greet or instruct your callers, so that they can route themselves directly to the person that they wish to speak to, by following the instruction given.

Conference

This feature enables up to 3 internal parties, 1 external and 2 internal parties, or even 2 external and 1 internal party, to conduct a 3-way conversation.

Handsets

Speaker

Enables extensions to receive paging messages through inbuilt speaker. Handsfree working is also possible with the KX-T7130E and KX-T7020E handsets.

Dual Colour Line Keys

Visual indication of the status of lines or extensions, giving information as to availability i.e. hold, busy, free etc.

LCD Display

Shows date and time, number dialled, extension number calling and call duration.

Conference

Up to 3 internal parties may be involved in a simultaneous telephone conversation.

FWD/DND

Simple one touch key to set or cancel either Do Not Disturb or Call Forward to another extension.

Save

Allows an extension to store a specific number for redialling later, without needing to look up the number again.

Transfer

Ensures that all calls are processed efficiently, and allows them to be announced or unannounced to the relevant extension.

Pause

A useful facility allowing an extension to enter a pause when wishing to access special services during dialling out i.e. telephone banking, voicemail etc. A pause may also be stored in the speed dial memory between digits if required.

Auto Dial

Extensions are able to access a common list of up to 40 System Speed Dial numbers.

Redial

Pressing the Redial key will automatically dial the last number without having to clear the line.

Hold

If an extension puts an external caller on hold, the caller can hear music (when programmed).

Speaker Phone

By pressing the speaker key, an extension is able to conduct a telephone conversation completely handsfree and switch between handsfree and off-hook working if required.

Auto Answer

Internal calls can be answered automatically, to allow extensions to speak handsfree (KX-T7130E/KX-T7020E).
